

# Hepatitis C Can be Cured!

The CDC recommends that all individuals over age 18 should be tested at least once for Hepatitis C.

Hepatitis C is the most common blood borne viral infection in the US. Hepatitis C is easily spread through contact with infected blood and if left untreated, it can lead to serious liver problems such as cirrhosis or cancer.

## Hepatitis C is spread through:

- ▶ Body fluids (blood, semen, vaginal and rectal fluid)
- ▶ Having unprotected sex
- ▶ Sharing personal items like toothbrushes, razors, or nail clippers
- ▶ Sharing injection drug works or tattoo needles and inks

## Health Center Locations:
